SUMMARY

Detail-oriented Electronics & Telecommunication student skilled in Python, SQL, Power BI, and data analytics with hands-on experience in data cleaning, preprocessing, visualization, dashboarding, and machine learning projects. Experienced in analyzing datasets, identifying trends, automating workflows, and building data-driven solutions using Python and BI tools. Strong analytical, problem-solving, and cross-functional collaboration skills with interest in AI, business analytics, and process optimization.

EDUCATION

Dwarkadas J. Sanghvi College of Engineering
Bachelor of Technology in Electronics and Telecommunication

Mumbai, MH
2023-Present

EXPERIENCE

Administrator – TEDx (DJSCE)

Mumbai, MH
Oct 2025 -Present

- Coordinated across 5+ teams to ensure smooth execution of large-scale event operations
- Managed scheduling, documentation, and workflow tracking under strict timelines
- Collaborated with cross-functional teams to resolve operational bottlenecks efficiently
- Streamlined communication processes, improving coordination and reducing delays
- Assisted in coordinating multiple parallel workflows during event execution

PROJECTS

Customer Behavior & Retention Analysis | Python (Pandas), SQL (PostgreSQL), Power BI

- Analyzed 3,900+ customer purchase records to identify shopping behavior and revenue trends
- Cleaned and transformed datasets using Python (Pandas) and PostgreSQL for structured analysis
- Identified key business insights including 68% higher spending among subscription customers and higher revenue contribution from express shipping users
- Built interactive Power BI dashboards to visualize customer segmentation, purchase patterns, and product performance
- Automated parts of the data cleaning and reporting workflow using Python and Power BI

Healthcare Data Analysis | Python (Pandas), Matplotlib, Seaborn

- Analyzed 750+ patient health records to study diabetes-related risk factors
- Identified class distribution with approximately 65% non-diabetic and 35% diabetic cases through outcome analysis
- Observed majority BMI values concentrated between 25–38, indicating prevalence of overweight and obesity-related risk factors
- Found glucose levels primarily distributed between 90–140, with diabetic patients showing noticeably higher glucose concentrations
- Performed comparative analysis between diabetic and non-diabetic patient groups using scatter plots and distribution visualizations

Automated Waste Segregation System | Python, Machine Learning, Sensors

- Developed a machine learning model achieving ~90% accuracy for waste detection
- Integrated sensor-based system for identifying different waste types
- Improved operational efficiency through automation techniques
- Worked on system design and implementation in a team-based environment

SKILLS

Technical Skills: Python (Pandas, NumPy), SQL (PostgreSQL), Power BI, Tableau, Excel (Data Cleaning, Pivot Tables, VLOOKUP)

Data Visualization: Matplotlib, Seaborn

Data Analytics: Machine Learning, Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA), Predictive Analytics, Data Validation

Soft Skills: Analytical Thinking, Problem Solving, Cross-functional Collaboration, Communication
