SUMMARY

Electronics & Telecommunication student with experience in Python, SQL, and AI-based applications, along with a strong interest in automation and business analytics. Worked on projects involving data analysis, machine learning, dashboards, APIs, and process optimization. Enjoy building practical tools that reduce manual effort, improve decision-making, and solve real-world business problems. A quick learner with strong analytical and problem-solving skills who enjoys collaborating across teams.

EDUCATION

Dwarkadas J. Sanghvi College of Engineering
Bachelor of Technology in Electronics and Telecommunication

Mumbai, MH
2023-Present

SKILLS

Programming & Databases: Python, SQL, PostgreSQL, Pandas, NumPy

AI & Automation: FastAPI, REST APIs, Workflow automation, prompt engineering, LLMs (ChatGPT, Claude), Git, Docker

Data Analytics & Visualization: Power BI, Tableau, Matplotlib, Seaborn, EDA, dashboard development

Business & Collaboration: Excel, analytical thinking, problem solving, process optimization, stakeholder communication

PROJECTS

SafeVision AI | Python, FastAPI, PostgreSQL, Computer Vision

JUN 2026

- Developed an AI-powered industrial safety monitoring system using computer vision to detect workplace safety violations from image and video inputs.
- Built FastAPI REST APIs, integrated PostgreSQL for centralized event management, and automated detection workflows for reporting.
- Improved detection reliability through Python-based preprocessing and designed the system for scalable, real-world deployment.

Healthcare Data Analysis | Python, Pandas, Matplotlib, Seaborn

MAR 2026

- Analyzed 750+ patient health records to identify diabetes-related risk factors and health trends using Python.
- Cleaned, transformed, and explored healthcare datasets through exploratory data analysis and feature visualization.
- Developed visualizations to compare diabetic and non-diabetic patient groups and identify key health trends.

Customer Behavior & Retention Analysis | Python, SQL, PostgreSQL, Power BI

DEC 2025

- Analyzed 3,900+ customer purchase records to identify shopping behavior, revenue trends, and customer retention patterns.
- Cleaned and transformed datasets using Python and PostgreSQL while automating parts of the reporting workflow.
- Developed interactive Power BI dashboards to visualize customer segmentation, purchasing trends, and business performance.

ACADEMIC RESEARCH

Automated Waste Segregation System | Python, IoT, Machine Learning

SEPT 2025-MAY 2026

- Developed a custom dataset for sanitary pad detection by collecting, labeling, and organizing images for machine learning training.
- Contributed to the machine learning integration for automated sanitary waste detection as part of an intelligent waste segregation system.

IoT-Enabled Smart Helmet Breathalyzer | IoT, Embedded Systems, Research

AUG 2024-MAR 2025

- Designed an IoT-enabled smart helmet for alcohol detection and real-time monitoring, focusing on improving road safety through intelligent sensing.
- Researched sensor integration, data acquisition, and future AI-based enhancements for driver risk assessment and accident prevention.
